Aufgabe 2. (mirroredpalindrome). (100 Points)

A regular palindrome is a string of numbers or letters that is the same forward as backward. For example, the string “ABCDEDCBA” is a palindrome because it is the same when the string is read from left to right as when the string is read from right to left.

A mirrored string is a string for which when each of the elements of the string is changed to its reverse (if it has a reverse) and the string is read backwards the result is the same as the original string. For example, the string “3AIAE” is a mirrored string because “A” and “I” are their own reverses, and “3” and “E” are each others’ reverses.

A mirrored palindrome is a string that meets the criteria of a regular palindrome and the criteria of a mirrored string. The string “ATOYOTA” is a mirrored palindrome because if the string is read backwards, the string is the same as the original and because if each of the characters is replaced by its reverse and the result is read backwards, the result is the same as the original string. Of course, “A”, “T”, “O”, and “Y” are all their own reverses.

A list of all valid characters and their reverses is as follows.

Character	Reverse	Character	Reverse	Character	Reverse
A	A	M	M	Y	Y
B		N		Z	5
C		O	O	1	1
D		P		2	S
E	3	Q		3	E
F		R		4	
G		S	2	5	Z
H	H	T	T	6	
I	I	U	U	7	
J	L	V	V	8	8
K		W	W	9	
L	J	X	X		

Note that O (the letter) and 0 (zero) are considered the same character and therefore ONLY the letter "O" is a valid character.

Input The first line contains the amount of words n . The following n lines contain one word each. Every word will consist of two to twenty valid characters. There will be no invalid or small characters in any of the strings.

Output For each input string, you should print the string followed by exactly one of the following strings.

STRING	CRITERIA
-- is not a palindrome.	if the string is not a palindrome and is not a mirrored string
-- is a regular palindrome.	if the string is a palindrome and is not a mirrored string
-- is a mirrored string.	if the string is not a palindrome and is a mirrored string
-- is a mirrored palindrome.	if the string is a palindrome and is a mirrored string

Note that the output line is to include the -'s and spacing exactly as shown in the table above and demonstrated in the Sample Output below.

Sample Input

```
4
NOTAPALINDROME
ISAPALINILAPASI
2A3MEAS
ATOYOTA
```

Sample Output

```
NOTAPALINDROME -- is not a palindrome.
ISAPALINILAPASI -- is a regular palindrome.
2A3MEAS -- is a mirrored string.
ATOYOTA -- is a mirrored palindrome.
```
